SEAWAX MARINE COATINGS SAS

TODAY, MAINTAINING A BOAT WHILST
PROTECTING SEA LIFE HAS BECOME POSSIBLE!

SEAWAX MARINE COATINGS®
HAS DESIGNED TWO SOLVENT AND BIOCIDIC

FREE AQUEOUS FORMULAS

SEAWAX FOULING RELEASE®

ANTI-FOULING TREATMENT

SEAWAX ETCH PRIMER®

ETCH PRIMER

SEAWAX FOULING RELEASE®

Antifouling coating

Seawax Fouling Release® is an “eco-designed” antifouling coating in aqueous phase. Its main benefit is its innocuousness: it is biocide-free and toxic solvent-free, therefore not hazardous for the aquatic environment and the human health.

It brings its contribution to the preservation of marine life.

Its ingredients prevent and/or delay the fixation of microorganisms such as algae, shells or shellfish and/or make it very unstable. Also, there is a “self-cleaning” effect: when the boat sails, a water pressure is applied to the hull, all organisms then come off the substrate. Weight and water resistance, hydrodynamic trail are therefore reduced. Fuel consumption is also reduced and the hull requires less cleaning.

Applications:

Seawax Fouling Release® applies to steel, aluminium, wood, iron, polyester (except polypropylene and polyethylene) boat hulls (under works).

It is efficient on soft and rigid PVC beacon or mooring buoys, when applied first **Seawax Etch Primer®**. It can be used on all sea boats or river boats.

This coating offers very easy to apply conditions and short drying time.

A deeper bright look is obtained through a satin-finish.

SEAWAX MARINE COATINGS® is a French eco-company specialized in the design and development of innovating sea paints.

SEAWAX MARINE COATINGS® absolutely considers all environmental issues and builds a research program based upon sustainable development principles.

SEAWAX ETCH PRIMER®

Etch Primer

Seawax Etch Primer® is an “eco-designed” etch primer in aqueous phase. It is a mono-component product based upon a polyurethane resin. Because it is both highly resistant and soft, it protects boat bodies against mechanical defects (cracks). It is an ideal insulator that contributes to the water-proof of the substrate. Its original formula prevents or retards corrosion. It can be used on all sea boats or river boats.

Applications :

Seawax Etch Primer® applies to steel, aluminium, wood, iron, polyester (except polypropylene and polyethylene) boat bodies, under works, upper works and superstructures, to soft and rigid PVC beacon or mooring buoys.

This coating can be applied directly onto the substrate or onto existing coatings and offers very easy to apply conditions and short drying time. A deeper bright look is obtained through a satin-finish.

Our main R & D axis is the design of “eco-designed” products that integrate environment-friendly raw materials complying with the European Directive N° 98/8/CE. Our solvent-free formulas in aqueous phase use vegetal raw materials and are patented.
